

# Minutes Of Meeting:

Jan 30th 2023

The meeting's goal was to gather requirements for the SaaS application. The client said that the proof of concept code will be shared with our team after some time. Possible frontend technologies that can be use - Ant design, MUI, tailwind were discussed.

Requirements were analyzed and collected. The screens to be developed - vendor, customer, admin were discussed. The key users for the website will be the vendors i.e. dairy farmers looking to sell their products and the customers. Other users include the delivery team consisting of drivers who deliver the products and possibly a farm manager.

Client discussed that the startup already uses Amazon web services server, so for deployment out team will look into AWS and how to deploy the mern application on an AWS server.
